

# Applications Program FAQ

## What is the Applications program?

The Applications program provides you with research-backed design typicals that focus on our standard statements of line. Applications offer you creative inspiration, information to create more customized client-specific solutions, and downloadable drawing files and imagery to make your design process easier. Each Application also features a budget price range, overall footprint range, and similar Application suggestions.

## What can I do with Applications?

Applications provide you inspiration and solutions to help you address real-world issues clients are facing. With Applications, you can:

- Showcase the capabilities of Haworth products through relevant design ideas.
- Replicate applications shown in brochures, design guides, and other marketing assets.
- Share the images with clients to start conversations and gain an understanding of their preferences.

## How do Applications work?

Applications aid you in the design process by providing configurations and ideas you can use as shown in the vignettes or as a basis for creating your own designs. Start by finding an Application you like through the Applications program on the Library. Each Application page allows you to download the all the associated drawing files and images for the selected Application. Then, you can easily change sizes, finishes, and/or products to customize a solution for the client's needs.

## What pricing information is available through Applications?

The Applications program offers a budget price range for each Application, which is not to be used in quotes. Designers can obtain line-item pricing from Canvas or AutoCAD, which allows them to modify layouts and provides more accurate pricing for the sales team and customer.

## Can I just keep my own library of Applications for future projects?

Applications are continually updated, revised, and/or archived. We recommend that you access Applications regularly for each project to ensure you have the most current files and information. You won't want to miss out on a new idea that can better meet a client's needs.

## How can I tell if an Application has been updated or revised?

Applications that have been refreshed with new or different products/features will have a version tag attached to their original base number. For example, the first update for Application #51 would be #51\_1. The next time it is updated, the number would become #51\_2, and so on. All older versions will be archived. Archived files are available upon request, using the process outlined in response to the question below.

## How can I request drawing files that aren't in the Applications program?

Send an email including the following information to [applications@haworth.com](mailto:applications@haworth.com).

- Type of drawing file needed (SketchUp, Revit, AutoCAD, Canvas)
- Date you need the file

We will respond with a feasible turnaround time based on the requested file's size and support.

## How do I report errors or technical issues with files?

Send an email describing the issue and Application number to [applications@haworth.com](mailto:applications@haworth.com).
